

## Apple 'Edite'

*A disease resistant late apple for regions with cool climate. Cross 'Liberty' x 'Latkrimson'. Breeder's rights: Institute of Horticulture, Latvia, 2009.*

**Ripening:** late midseason (with 'Lobo'), fruits hold very well on the tree.

**Storage:** 4-5 months common storage.

**Fruits:** over medium size (70...80 mm), round conical, slightly oblong, smooth.

**Skin:** firm, bright orange red on at least half of fruit, ground colour yellow.

**Flesh:** yellow, pink under skin, crisp, juicy, subacid (at picking - acid). Firmness 5.5...7.5 kg/cm<sup>2</sup>, Brix 12...14 %, titrable acid 0.5...0.8 %.

**Tree:** medium vigour, good frame, some tendency to bare wood. Winter-hardy.

**Yield:** good to medium, regular, fruits self-thinning.

**Flowering time:** medium.

**Resistance:** resistant to scab (Vf/Rvi6), tolerant to other diseases (mildew, fruit rot, *Nectria* canker).

*Positive traits:* Complex disease resistance; winterhardiness; bright, smooth fruits; regular production, fruits self-thinning.

*Drawbacks:* May be too acid at harvest; skin scald for late-harvested fruits.
