

Simple and cheap
equipment for small scale
production of
seabuckthorn

Why we can't afford expensive equipment:

Example Germany

Biggest orchard 80 ha

Exampel Sweden

Biggest orchard 6 ha

In the orchards: Weeds

- 0-4 years: Black plastic
- After that: Fingerweeder

In the orchards: Voles

Crossed stone with sharp edges

Around the roots

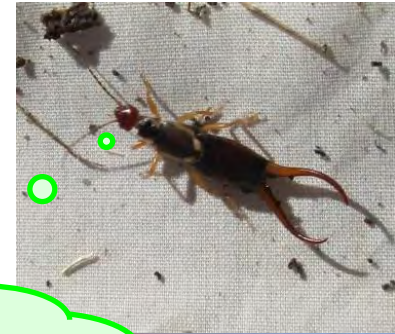

Around the branches, over the plastic

Activity in the orchard, tilling under the scrubs

In the orchards: Psyllids

- Primarely on the males
- Can actually kill male shrubs
- ~~Pyrethrum~~
- Beneficials: Earwigs

I want 80-100
psyllids every night!

Harvesting

NO!
I will NOT
let go!!!

- Cutting
- Freezing
- Shaking
- Cleaning

Post harvest: Threshing

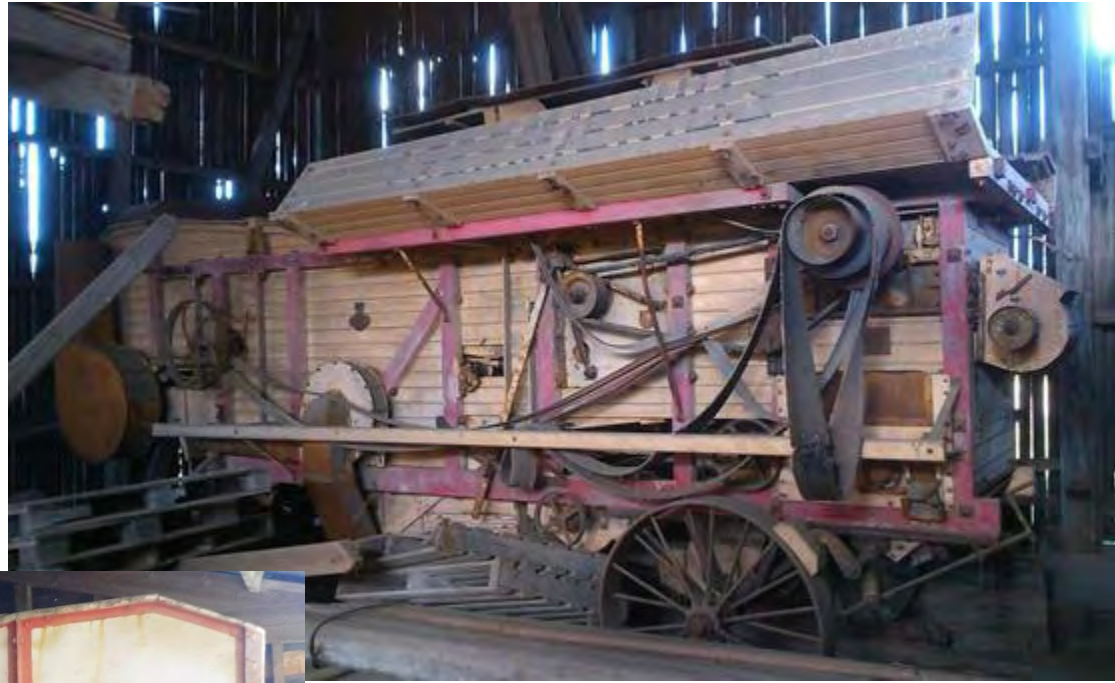

Diminutive scale - ancient
seed cleaners

Post harvest: Threshing

"Small" to "middle"
scale – ancient
threshers

Post harvest: Cleaning

*Thank You very much for Your
attention!*
